Natural Hearing Redefined

Cue® MRIC

Mini Behind-the-Ear (Mini-BTE)

Audina®
HEARING INSTRUMENTS, INC

life with conversation

capturing your surroundings

connecting with nature

The Cue® MRIC offers a range of important advantages

Enjoy Natural Hearing Again….

The Cue® MRIC is a mini behind-the-ear (Mini BTE) hearing instrument offering the latest technology with the microphone and receiver inside your ear canal for natural sound.

Life with Direction….

Cue's superior directionality enables you to know where sounds are coming from and allows you to focus on the conversation you want to hear.

Immediate Comfort….

No need for an ear impression, you can be fit with the Cue MRIC immediately. The Microphone/Receiver module is covered by a soft flexible dome that fits comfortably in your ear canal and is available in open and closed versions.

Cue® MRIC

No More Wind Noise....

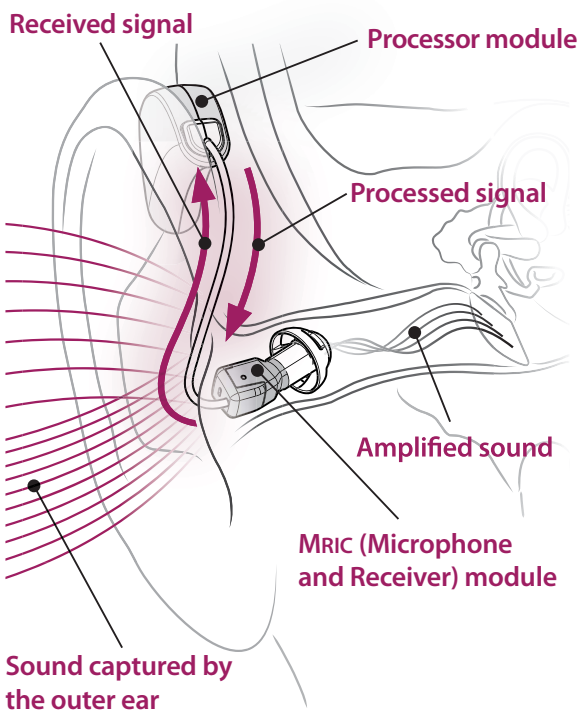
With the microphone comfortably located in your ear canal, it is prevented from picking up wind noise - so you may enjoy all your outdoor activities.

Keep it Simple....

Audina's exclusive SoftTouch® technology allows you to change memories with a simple touch to your ear for different listening environments. No button to push, no remote control to lose, no dial to turn... just a simple touch.

Nature and Innovation Come Together....

The Cue MRIC uses your own outer ear to capture and focus sound, just as nature intended. The microphone located in your ear canal picks up the vibrations and amplifies them producing crisp, natural sound.



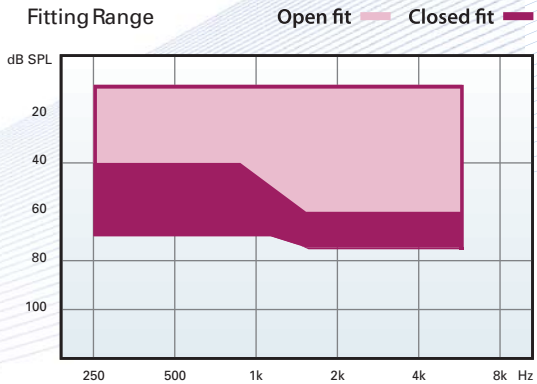
AUDINA'S CUE® MRIC (MINI BTE)
KEY BENEFITS

- Advanced Directionality provides you with the ability to understand conversation in noisy environments.
- Environmental Recognition System (ERS) reduces the annoyance and fatigue of background noise while giving clarity to speech.
- The unique design places the microphone inside the ear, eliminating wind noise.
- Advanced Adaptive Feedback Canceller eliminates the whistling associated with previous hearing instruments.
- Easy to use with any phone, no need for additional telecoil when talking on the phone.
- Optional Telecoil (T-coil) is available to link to inductive loop system or bluetooth neck-loop technology.
- Available colors: Black, Titanium, Champagne.

SoftTouch™ provides environmental memory changes with a gentle touch to the ear. Featured exclusively in Audina's Cue hearing instrument, SoftTouch provides the flexibility of four independent memories for different listening situations, all just a soft touch away!

Instant Fit!

The small MRIC module and the selection of soft dome sizes ensure an instant fit without the need for custom ear impressions.



For over twenty years, our professional associates at Audina® Hearing Instruments have designed and produced state-of-the-art hearing instruments to improve the lives of hearing loss patients.

- Privately owned American company and industry leader.
- Comprehensive product line to accommodate all hearing loss needs.
